Project Initial Features

AR-Schoolbook, an android app targeted for Bangla medium class-7 students. Initial features include,

- Each figure and experiment included in the book will be used as a marker.
 Pointing the camera at these markers will start the AR view/interaction.
- 2. AR experiences will be of two types,
 - a. Biology figures- A sizable 3D model of the figure will appear on screen and the user can touch different parts from the figure to highlight.
 - b. Chemistry/Physics experiments- 3D models of the equipment will appear and by pressing a proceed/back button steps of the experiment will play out in reality.
- A user(Teacher) can share his/her live AR interactions with other multiple users
 nearby without the internet and also remote users through the internet. In this
 case only the user sharing the screen can interact with the AR setting.
- 4. The user who is sharing can grant/revoke other users to control the AR setting (e.g- point out different parts in case of biology figures).
